

Enterprise Data Mashup (EDM) Service Engine

What is EDM?

- Provides a unified view of data from heterogeneous sources
- The sources of data can come from
 - Relational databases, flat files, spreadsheets, Web services, RSS/Atom, XQuery RowSet
- Can perform
 - Join'ing/aggregation, cleansing
- Can use external services
 - XSLT

Demo Scenario: “Join'ing tables from multiple databases”

- Join data from multiple databases from a single database server (or multiple database servers)
- Modify Join conditions
